

BEFORE 9:15 — PREPARE

Write down exactly three numbers:

- Yesterday's closing price
- Nothing else yet

Open your chart. Set it to 1-minute candles on Nifty 50 index. Be ready before the bell rings.

9:15 — THE OPEN

The moment the market opens, note:

- The exact open price. Call this **OPEN**.
- Watch the first candle form for 60 seconds.

Do not touch anything. Just watch.

9:16 — FIRST CANDLE COMPLETE (H3)

Look at the 9:15 candle. One question only:

Did it close BELOW the open price?

YES → Write: **BIAS = SHORT** NO → Write: **BIAS = LONG**

Store this. You will use it later.

9:16 to 9:29 — WATCH THREE THINGS SIMULTANEOUSLY

You are tracking three numbers as they update every minute:

Number 1 — ORB High The highest price reached so far today. Updates every minute if a new high is made.

Number 2 — ORB Low The lowest price reached so far today. Updates every minute if a new low is made.

Number 3 — H2 flags Every minute ask yourself:

Has price gone ABOVE the open price even once?

If the answer is still NO at 9:25 → write: **H2 SHORT DEVELOPING**

Has price gone BELOW the open price even once?

If the answer is still NO at 9:25 → write: **H2 LONG DEVELOPING**

If price has crossed both sides → write: **H2 DEAD**

9:29 — LOCK YOUR NUMBERS

At exactly 9:29, freeze three final numbers:

- **ORB HIGH** = highest price of the session so far
- **ORB LOW** = lowest price of the session so far
- **F15 DIRECTION** = is price right now above or below OPEN?

Price at 9:29 ABOVE open → F15 = UP

Price at 9:29 BELOW open → F15 = DOWN

Write F15 direction down. This is H4.

Now check:

Does F15 direction AGREE with your BIAS from 9:16?

YES — both pointing same way → **HIGH CONVICTION DAY** NO — they disagree → **LOW CONVICTION DAY**

9:30 — THE ONE DECISION MOMENT

This is the only moment you make a trading decision all morning. Follow this exact sequence. Do not skip steps.

STEP A — Check H2 first (highest priority)

Is H2 SHORT DEVELOPING still active?

(Price has NEVER crossed above OPEN in the entire 9:15–9:29 window)

YES →

- Signal = **SHORT**
- Entry = market order right now at 9:30 open
- Stop loss = OPEN price
- Size = FULL if BIAS agrees (both short) / HALF if BIAS disagrees
- Go to STEP E

Is H2 LONG DEVELOPING still active?

(Price has NEVER crossed below OPEN in the entire 9:15–9:29 window)

YES →

- Signal = **LONG**
- Entry = market order right now at 9:30 open
- Stop loss = OPEN price
- Size = FULL if BIAS agrees (both long) / HALF if BIAS disagrees
- Go to STEP E

Neither H2 condition active → Go to STEP B

STEP B — Check H1 (ORB Breakout)

Did the 9:30 candle CLOSE ABOVE ORB HIGH?

AND has price NEVER broken ORB LOW at any point today?

YES →

- Signal = **LONG**
- Entry = market order now
- Stop loss = ORB LOW
- Size = FULL if F15=UP and BIAS=LONG (all three agree) / HALF if any one disagrees
- Go to STEP E

Did the 9:30 candle CLOSE BELOW ORB LOW?

AND has price NEVER broken ORB HIGH at any point today?

YES →

- Signal = **SHORT**
- Entry = market order now

- Stop loss = ORB HIGH
 - Size = FULL if F15=DOWN and BIAS=SHORT (all three agree) / HALF if any one disagrees
 - Go to STEP E
-

STEP C — Both ORB sides broken?

Has price broken BOTH ORB HIGH and ORB LOW at any point today?

YES → **NO TRADE. Choppy day. Stop here. Go to H9 check and then wait for 15:28.**

STEP D — Neither ORB side broken by 9:30?

Wait until 9:45.

Has price still not broken either ORB HIGH or ORB LOW?

YES → **NO TRADE this morning. Stop here. Go to H9 check and then wait for 15:28.**

ORB broken by 9:45 → go back to STEP B with the 9:45 candle close instead.

STEP E — Apply the H9 size modifier before entering

Before you press the button, do one final check:

Were the last 2 or more days both positive close-to-close days?

YES and your signal is **LONG** → **REDUCE size by half again**. Consecutive up days mean reversal risk is elevated. You still take the trade but smaller.

YES and your signal is **SHORT** → No change. Consecutive up days support short bias.

NO → No change to size.

Now enter.

9:30 to 15:15 — MANAGE. TWO RULES ONLY.

You have one trade on. From now until 15:15 you only watch for two things:

RULE 1 — Did price re-enter the ORB range?

LONG trade: price drops back BELOW ORB HIGH → **EXIT IMMEDIATELY. Signal failed.**

SHORT trade: price rises back ABOVE ORB LOW → **EXIT IMMEDIATELY. Signal failed.**

RULE 2 — Is it 15:15?

YES → **EXIT EVERYTHING. No exceptions. No "just a bit longer."**

Nothing else matters between 9:30 and 15:15. No news. No second-guessing. No adjusting stops. You set the stop at entry. You exit at signal failure or 15:15. That is all.

15:15 — MORNING TRADE CLOSED

Write down your result. One line in a journal:

Date | Signal | Entry | Exit | Reason | Return

Now reset your mind completely. The next trade has nothing to do with what just happened.

15:15 to 15:27 — PREPARE H13

Do nothing. Just wait. Keep your chart open.

H13 runs on **every single day** regardless of whether the morning trade fired, won, or lost. Good day, bad day, no signal day — H13 always happens at 15:28.

15:28 — H13 ENTRY

At the EXACT CLOSE of the 15:28 candle → BUY

No conditions. No checks. No filters. Every day. Always long. Always at the close of 15:28.

Size = your standard unit. Same every day.

15:29 — H13 EXIT

At the EXACT CLOSE of the 15:29 candle → SELL EVERYTHING

Profit or loss — does not matter. You are out. The trade is done in 60 seconds.

AFTER 15:30 — DONE FOR THE DAY

Write one more journal line for H13:

Date | 15:28 entry | 15:29 exit | Return

Note today's closing price. It becomes tomorrow's reference.

Close your charts.

THE COMPLETE ROBOT FLOWCHART — ONE PAGE

Before 9:15 → Note yesterday close. Open chart.

9:15 → Note OPEN price.

9:16 → First candle red? BIAS=SHORT. Green? BIAS=LONG.

9:16–9:29 → Track ORB HIGH and ORB LOW every minute.
Price never above OPEN? → H2 SHORT developing.
Price never below OPEN? → H2 LONG developing.

9:29 → Lock ORB HIGH, ORB LOW.
Price above OPEN? F15=UP. Below? F15=DOWN.
F15 agrees with BIAS? → HIGH CONVICTION.

9:30 → STEP A: H2 active? Trade it. STOP.
→ STEP B: ORB broken one side? Trade it. STOP.
→ STEP C: Both sides broken? NO TRADE.
→ STEP D: Neither broken? Wait till 9:45.

→ STEP E: Last 2 days up? Halve long size.
→ ENTER with correct size.

9:30–15:15 → Watch for two exits only:
Signal failure (re-entry into range) → EXIT.
Clock hits 15:15 → EXIT.

15:15 → Close morning trade. Journal it.

15:28 → BUY at candle close. No conditions.

15:29 → SELL at candle close. Done.

After 15:30 → Journal H13. Note closing price. Close charts.
